

"Technocracy" is receiving considerable publicity these days. We don't know much about it, but we don't like the name. In fact we don't like anything with a "knack" in it. If this thing were called "Technocracy" or something like that we think it would have more chance of success.

Efforts Being Made To Develop Reward Wheat To Replace Garnet And Retain Milling Qualities

The great victory won by Herman Trelo in the Chicago grain show, with his strain of Reward wheat, has aroused interest in Canada's effort to produce a wheat that will surpass all other breeds in meeting the needs of the farmers in the northern portion of the prairie provinces. But winning of this coveted prize does not in itself settle the question, it was explained by cereal experts at Ottawa.

What the west wants is a wheat that will be as early ripening as Garnet, as prolific as Garnet, and have as good milling qualities as Marquis. There is no doubt about the milling qualities of Reward.

It has everything in the way of quality, cereals agree. For two or three years it has been right up near the top or at the top, both in appearance and milling qualities. In some districts where it has been grown in the west it has been given as early as Garnet, an attribute which has made the latter so popular, where crops run the danger of early frosts. The productivity of Reward may in spots have been equal to Garnet, but not on the average, and farmers want to get as many bushels as possible per acre. That is the reason why Garnet has been so popular, and the fact that it cannot grade as No. 1, because of the milling qualities.

For over a year it has been being grown over Garnet, which it should be graded separately so that overseas millers would not be misled into thinking they are buying No. 2 Marquis and getting Garnet.

Only a short time ago the announcement came that Reward wheat that Garnet would be graded separately next crop year. So far the growers of Garnet have fought this move, and a preliminary intense struggle was staged in the common agricultural committee last spring, which resulted in a decision that Reward wheat be planted until next year.

In the meantime intense efforts have been made to breed a Reward that will take the place of Garnet, and retain its great milling qualities. The experimental farms, under the direction of E. B. Archibald, have supported the efforts of L. H. Newman, Dominion cerealist, in the search after such a superior wheat in this great enterprise, Herman Trelo has contributed no small part.

Used To Figuring Odds

Bookmaker Instantly Solves Problem Which Took Profound Thought The University mathematics professor is fast and clever at figures, of course, but it takes a bookmaker for real speed.

A reporter at Louisville, Kentucky, querying at random, asked, "What are the odds if a horse is asked to turn on his back or dance in three cuts of a 23-card deck? Many answers were given, ranging from 9 to 4 in favor to 15 to 9 against."

A Louisville university mathematics professor said 9 to 4. Several hours later he submitted a 600-word answer showing the odds at 1,197 to 1,000.

The city editor of the newspaper employing the reporter telephoned a bookmaker. "Hold the phone a minute," he said. "Then in a flash replied, '1,197 to 1,000.'"

"Now, it wasn't hard," the bookmaker said. "We figure odds like that a dozen times an hour."

Fans From Many Countries

Extensive Collection Shown At Antique Exposition in Chicago An Egyptian fan, preserved in a fan-shaped glass pane, and one that may have been used by Cleopatra while beguiling Marc Antony, is on display in Chicago amongst an extensive collection of fans from many countries at a hobby, antique and collectors' exposition.

The fan has delicate paintings of Cleopatra on parchment mounted on tortoise shell. Other exhibits include fans which can be converted into opera glasses and fans which are easily transformed into wicked looking daggers.

Seven of the sons of Monday Izal, emperor of Morocco from 1673 to 1737, assumed the title of emperor.

Barber: "How is it to your hands are so dirty?"

Apprentice: "Nobody had a shampoo today."

W. M. U. 1972

Trade With Fiji Islands

Governor Fletcher Hopes To Develop Banana Trade With Dominion "We are looking to increase trade with Canada," said Sir Murdoch Fletcher, K.C., C.M.G., C.B.E., governor of the Fiji Islands, on his arrival at Victoria by the liner Niagara from Suva.

"We are hoping to develop our banana trade and in this connection I propose to investigate the possibilities here," added the governor.

"There are no finer bananas grown in the world than in the Fiji, and there should be a good market for this fruit in Canada," he said.

"Canada takes a large percentage of our sugar, and she has always treated us fairly in trade. The preference on sugar is quite a big one, and for this we are most grateful. It makes quite a difference to a small colony like ours."

The Fiji has enjoyed a record sugar crop this season, totalling some 160,000 tons, as compared with the previous harvest crop of 116,000 tons. Most of this raw sugar is re-exported in British Columbia.

British Kip Leather

Is Now Exempted From the Exchange Dump Duty

As a first step in implementing the Anglo-Canadian trade agreement, which provides that the Canadian Government shall remove the special dump duties against British imports of such as possible the national revenue department has issued an order exempting British kip leather from the exchange dump duty.

Kip leather is one form of raw leather, and is not listed, individually, in the trade returns. The entire imports of this class of leather, however, in the year ended March, 1932, were \$626,350, of which \$122,000 was kip leather. It does not appear to have been any substantial importation from the United Kingdom. The bulk of the leather comes from the United States and Germany.

Policeman: "Had you an order to come on?" Little Jones: "O-C-Certainly, my wife told me." Passing Show, London.

Peculiar Effect of Altitude

Lack of Oxygen Affects Brain Centres Ouplet of Biology Professor

"Altitudo jugi" have been made the subject of an intensive study by Dr. Edward Schneider of Wesleyan University, Middletown, Conn., who recently explained the causes of the phenomena to faculty and students of the University of Colorado medical school at Denver.

Aviators and mountain climbers who ascend to great heights suffer some peculiar physical and mental effects, according to Dr. Schneider. In many cases they act in very lively alcoholic drunks.

Dr. Schneider said that during the world war aviators, far above the earth, would often wave to enemy flyers instead of attempting to shoot them down.

Lack of oxygen in the atmosphere at high altitudes is responsible for the peculiar effects, Dr. Schneider said. Headaches are usually the first noticeable effects of the rarified atmosphere.

Using huge tanks, from which the air has been pumped, Dr. Schneider has been able to create artificial conditions similar to those found at great heights. He has found that there are two types of people affected by altitude—fainters and non-fainters. Lack of oxygen affects the lower brain centres of the fainters and the higher brain centres of the non-fainters, according to Dr. Schneider's experiments.

In high altitudes, Dr. Schneider has found, the body releases oxygen and develops in the system. This gives the body an increased oxygen-carrying capacity.

One of the most striking effects of high altitude noted by Dr. Schneider was the impairment of mental faculties. During the war aviators were often known to make two exposures on one plate while photographing.

Dr. Schneider is professor of biology at Wesleyan University. His interest in the effects of altitude on human beings dates from the time he served as a member of the Colorado College faculty at Colorado Springs, in the shadow of Pike's Peak, from 1905 to 1910. He was a psychologist at the government school of aviation medicine founded at Mitchell field from 1919 to 1926.

"Can anyone in the class give me a more elegant rendering of 'the sap rises'?"

"The boob gets out of bed."

Common sense is frequently uncommon wisdom.

Venice Was Ideal Target

But City Escaped Damage From Bombs Dropped During War The Prince of Wales's remark when he was taken round Venice this year was: "All this is very different from when I was here during the war!"

In 1917 Venice was a black mass in the centre of the protection of the bombs of Austrian airmen. Of its 160,000 inhabitants less than 50,000 remained, and they were cut off from the rest of Italy. Nearly every night they gathered for safety in the entrance halls of the magnificently-furnished palaces, waiting in fear while enemy aeroplanes came, went back, and came again with their cargoes of bombs. The damage done by the Austrian air-raids, however, was extraordinarily small. Most of the hundreds of shells dropped upon the city fell into the canals and did no harm. Yet, when one considered how ideal a target Venice was—located as a black mass in the centre of the shining, moonlit lagoon—it is surprising that anything was left.

Grasshopper Pest

Predicted Hoppers Will Be Worse Next Year Than Ever

Warning that the grasshopper pest in the prairie provinces will be worse next year than it was this summer was voiced by Norman Cridde, of the entomological laboratory, Truro, Man., who is in Ottawa attending the annual convention of the Entomological Society of Canada.

Mr. Cridde characterized the combat waged against the insects last summer as "the biggest battle ever waged in western Canada."

"Even the wars with the Indians can compare with it," he added. Between \$5,000,000 and \$10,000,000 has been saved to the country as a result of the conflict, and 20,000,000 bushels of wheat have been saved from the ravages of the pests.

At present in the prairie provinces there were 150 grasshopper eggs to the square foot in some places, Mr. Cridde said, predicting that next summer the "plague" will be worse than ever.

"Ah, if you are going to Zurich," he recommended you a good hotel. "It is no longer sold by agents, but by 'estate conservators'."

For two years the ironic observers of common sense, the business man, have derived unending amusement from his attempts at verbal beauty.

Underwriters have become morticians, real estate agents have become realtors, press agents have become counsellors on public relations, plumbers have become sanitary engineers, and in general selling has become the financial qualification plan.

Such reachings out for bigger and bolder words, if they call for criticism at all, would be properly attacked by the conservatively minded, for whom the good old words of their fathers are good enough.

Charity should be accorded the effort of the business man to wrench himself out of old grooves. The revolutionary urge is essentially the same in the "junior communications engineer," formerly the messenger boy, in the "modern" poetry and furniture and in the foreign and antique names for shops and inns—St. Catherine's Standard.

England A Clean Country

England is the cleanest country in Europe, according to statisticians published recently in Prague, Czechoslovakia. The figures show the amount of soap used. English people use 21 pounds per capita a year. Germans are second with 15 pounds per person. People of Czechoslovakia are third with 11 pounds per head.

Rural automatic telephone service is being opened in Northern Ireland.

"What is your occupation?" "It isn't an occupation, it's a pursuit. I'm a bill collector."

Interesting Experiment Carried On by Department of Interior in Preserving Wild Life of Canada

Learning To Fly

Must Learn To Operate Machine In Full Flight Before Mastering Art of Landing

It may seem rather like putting the cart before the horse that the pupil in flying is taught thoroughly how to handle a machine in full flight before he even knows how to take off or to land, writes Mr. Alan Warwick, in Pearson's Magazine. The point is, of course, that at several thousand feet in the air errors of control can be made more or less with impunity. There is ample time for the pupil to correct them or if he gets himself tied up into knots, the instructor can straighten things out.

Landing a machine, or taking off, on the other hand, gives no such aid. The machine is very near the hard, hard ground. Wherefore, both these phases of flying are supervised more particularly the landing—only for a period of judgment that the pupil obviously cannot possess until he has become thoroughly familiar with the controls, a familiarity he only acquires in mid-air.

To the beginner it may well seem that the delicate work of landing a machine—achieving the ideal three-point landing, full-steady, and wheels setting gently on the ground together—is something far too difficult for him ever to accomplish. But as his lessons proceed he soon modifies his view. Such is the confidence and self-reliance he acquires when at last he comes to mastering the take-off and landing, the control-column has become almost part of himself, and he finds they are problems that will be his companions.

Before taking the tests for his 'A' license, the new pilot must have flown at least three hours solo. He tests himself, in addition to showing flying skill, includes a simple medical examination. The additional questions put by the medical authorities are searching enough.

The qualifying pilot must also display knowledge of the elementary rules relating to air traffic. For instance, he must know the correct method of approaching a landing ground, and what he has to do when meeting another machine in mid-air.

As one quickly realizes, the "rule of the road" in mid-air is as important as the safety of aircraft as a rule and regulations for road traffic. Being of a three-dimensional nature, they are rather more complicated.

As one quickly realizes, the "rule of the road" in mid-air is as important as the safety of aircraft as a rule and regulations for road traffic. Being of a three-dimensional nature, they are rather more complicated.

What's In A Name

New Words For Occupations Do Not Affect Efficiency

Was there a scornful sneer in a recent mention of the fact that life insurance is no longer sold by agents but by "estate conservators"? For two years the ironic observers of common sense, the business man, have derived unending amusement from his attempts at verbal beauty.

Underwriters have become morticians, real estate agents have become realtors, press agents have become counsellors on public relations, plumbers have become sanitary engineers, and in general selling has become the financial qualification plan.

Such reachings out for bigger and bolder words, if they call for criticism at all, would be properly attacked by the conservatively minded, for whom the good old words of their fathers are good enough.

Charity should be accorded the effort of the business man to wrench himself out of old grooves. The revolutionary urge is essentially the same in the "junior communications engineer," formerly the messenger boy, in the "modern" poetry and furniture and in the foreign and antique names for shops and inns—St. Catherine's Standard.

"What is your occupation?" "It isn't an occupation, it's a pursuit. I'm a bill collector."

With the establishment of a small herd of twenty-eight pronghorn antelope known as elk from Buffalo National Park, Alberta, in the Pembroke Crown Game Preserve near Petawawa, Ontario, attention is directed to another interesting experiment in preserving our big game. Canada's efforts to restore the elk to their former numbers as one of the principal big game animals of the Dominion is another important chapter in the history of wild life conservation.

The saving of the buffalo from extinction, the protection and propagation of the antelope, and the sanctuary given to other species of our native wild life by the establishment of national parks and other game reserves is present-day conservation. It is expected that its achievements in these lines of wild life conservation. The twenty-five animals—five males and twenty females—placed in the Ontario game preserve near Petawawa were drawn from a herd of over 900 in British Columbia, which is administered by the National Parks of Canada, department of the interior.

The nucleus of that herd was a band of antelope, full-sized and full-blooded, a few deer and moose, were found enclosed in the park after the erection of a fence. The antelope were required to enclose the area in preparation for the reception of the Michol Pablo herd of buffalo. The following year, in 1918, the antelope were moved to the small band, which in the meantime had shown a natural increase of four.

In that year, the antelope were moved to the small band, which in the meantime had shown a natural increase of four. In 1919, the antelope were moved to the small band, which in the meantime had shown a natural increase of four. In 1920, the antelope were moved to the small band, which in the meantime had shown a natural increase of four.

THE COUNCIL'S PROBLEMS

If one is to judge from the many problems which face the town council at their regular meetings it is no snap to be on the council during these times. Ratepayers—especially those who have formed the habit of finding fault—would do well to attend the council meetings occasionally and acquaint themselves with some of the problems the Council has to face from time to time.

No doubt there are those in every community who take advantage of present conditions. Redcliff appears to be no exception. Just what to do in such cases places the council between the devil and the deep sea.

The collection of taxes, utilities, rents, etc., forms a big problem for the council. There are those, because of conditions generally, from whom the council has no more chance of collecting than Mrs. Hicks has of selling a suit of clothes to Ghandi. Others should be able to pay, but don't pay. Here again the council is up against it. Their human instinct suggests leniency, but their business judgment suggests drastic action.

One thing that would go a long way in helping the council out of their many difficulties would be if those who can pay, would pay, no matter how little, each pay day, or whether it be for taxes, rent, water or anything else from which the town derives its revenue. Other wise—as pointed out at the council meeting last Monday—it is going to be only a matter of time till the shifted burden is going to break the backs of the hens that lay the golden eggs.

THE SKATING RINK

Up to the present week weather conditions have been almost ideal this winter for the successful carrying on of an open air skating rink. It has been cold enough to make good ice, and at the same time moderate enough to make skating in the open enjoyable.

Our local skating rink has been considerably improved this year. The officers have gone to considerable trouble and have done a lot of work getting it in good shape, and yet there has been very little patronage so far.

There may be more than one reason for this state of affairs. Of course the first reason that suggests itself is the depression, hard times. While these may have something to do with it, they have not all. What are the rink officials doing to attract the public to the rink and getting them interested in its successful operation? What are the hockey enthusiasts doing to get the public interested in them. So far as the Review can see, the answer is "nothing."

Hockey fans have had opportunities to get games away from town with the promise of return games here, but advantage

was not taken of them. And what has the rink organization done to make the rink the center of attraction for the winter months?

A few years ago we had a rink in an abandoned garage, the ice space was about a quarter the size of our present rink but at that we had good hockey teams, some of the players of which learned the game here and later were good enough to play in larger centers in both Canada and United States. There is no reason why this performance could not be repeated here now. In the little old garage rink we had burlesque hockey games, masquerades, real hockey games, moccasins, skating parties etc. In a word the rink was a real live organization and it was well patronized. Why not now?

The rink is principally for the young people. There is only one time to learn to skate or play hockey and that is when one is young. The rink is here, the weather is favorable and we have our share of young people. Now the question is what's the matter with the young people today?

A Gentlemen's Game

Billiards has been called the most healthful, exhilarating and gentlemanly of games. Play a game of billiards with your friends on modern Brunswick equipment in the comfort of our Billiard Hall, and you really comprehend this statement.

JANUARY 31, 1933

The Last Day

on which you may make your entry for

The WORLD'S GRAN EXHIBITION and CONFERENCE

Regina

July 24 to August 5, 1933

This is your last opportunity to share in the Largest Cash Prize Ever Offered for Grain and Seed. But sure your entry is mailed before January 31st. . . And remember that your

EXHIBIT SAMPLE

Must be sent in time to reach the Secretary, at Regina, not later than

MARCH 1, 1933

If you have not already done so, write for particulars now, while there still is time, to your Provincial Department of Agriculture or to the Secretary, Imperial Bank Chambers, Regina, Sask.

Chairman National Committee HON. ROBERT WEIR
Minister of Agriculture for Canada

Chairman Executive & Finance Com. HON. W. C. BUCKLE
Minister of Agriculture for Saskatchewan

Imperial Bank of Canada
58th Annual Meeting

SOLIDITY THE KEYNOTE

Position of Bank Well Maintained

MR. FRANK A. ROUPH, President.

The notes of the Bank in circulation, at \$500,000, are lower by upward of \$200,000, and the deposits, at \$89,712,531.80, are almost placed before you. Due to falling prices and the necessity for many of our customers to encroach on their savings for necessary living expenses, the deposits in common with other banks and financial institutions, are down slightly. As a natural sequence profits are also slightly down, making a reduction in the rate of dividend paid, (again in common with other banks), to 10 per cent. per annum.

Report from our branches indicates that field crops in Ontario have been abundant. In Alberta good crops are reported with extremely low prices. In Manitoba the yield was considerably better than last year; in Southern Saskatchewan the yield of wheat was only 3 to 12 bushels an acre, but this is against a total failure last year. On the whole, the Prairies can be said to be better off than they were a year ago. There will be less distress and most farmers will be much better off than last year.

British Columbia is being aided by some new developments in the mining of metals. The output of the pack is larger. Vancouver is still in a slump, but the Government centre, and on the whole, the prospects in British Columbia can be considered reasonably good.

Newspaper Situation Needs Correction.

The situation in the newspaper industry is serious, and it is little more than a national calamity. The products of our forests and of our well-equipped mills should be sold at less than cost, which, of course, includes a reasonable return on the capital supplied by bona fide investors. It behooves those in charge to take steps to remedy the situation before they are forced to do so.

Business conditions are still unsettled, but I subscribe with those who believe the tide is turning, and while the upturn will necessarily be slow and depends upon the character of the upturn in the business, I continue to have unbounded faith in the ability of our people to pull through.

The Railway Problem.

I hope our Government, when the situation of the railway problem which is now under discussion in the Senate, will in the interim be able to find a solution which will be in any way satisfactory to the freedom of management of the Canadian Pacific Railway, which is perhaps Canada's greatest asset and which has been so competently managed by its own officers and Directors for a period of over fifty years.

Imperial Economic Conference.

Perhaps the most outstanding event of the year was the Imperial Economic Conference at Ottawa. With the agreement reached between the United Kingdom and Canada, we are assured of a much larger share of the British market in regard to wheat and flour, provided world prices are such as to permit us to take advantage of them. Similarly in regard to the export volume of business to Canadian Hog Raisers and Bacon Packers. For the first time, Canada there will also be an excellent market for its products. Careful study should be made of the British market requirements in regard to our pigmeat and other fruits and vegetables. In regard to Canadian manufacturers, and also to our Lumber Mills, the situation is a little uncertain, but Great Britain has given us preferences which should be helpful.

World Economic Conference.

The success which attended our Imperial Economic Conference at Ottawa makes us hope that a similar result will follow the World Economic Conference. The problems, however, are much more complex in view of the widely divergent views throughout the world on such questions as tariffs, regulations from as well as the depression, and the need for the International Conference to build up the Central Bank, and the need for a central bank, was not able to cope with the situation, but other measures (for one, the Reconstruction Credit Corporation based on the lines of the Canadian Finance Act) were enacted for the purpose of making available more credit and more money than it was possible to obtain from the Reserve Banks owing to the restrictions imposed upon them. If you can imagine the United States with a Finance Act instead of a Federal Reserve System, there would have been no cause for the enactment of special laws, and in fact there need never have been any money panic. Another question which does not seem to have received consideration is where the capital is to come from as well as the depression, and the need for the International Conference to build up the Central Bank, and the need for a central bank, was not able to cope with the situation, but other measures (for one, the Reconstruction Credit Corporation based on the lines of the Canadian Finance Act) were enacted for the purpose of making available more credit and more money than it was possible to obtain from the Reserve Banks owing to the restrictions imposed upon them.

Federal Reserve System Improved.

It is interesting to recall that the Federal Reserve System, a large scale bill the United States that the Federal Reserve System of that country, which was restricted by regulations such as, generally speaking, governs the Central Bank, was not able to cope with the situation, but other measures (for one, the Reconstruction Credit Corporation based on the lines of the Canadian Finance Act) were enacted for the purpose of making available more credit and more money than it was possible to obtain from the Reserve Banks owing to the restrictions imposed upon them.

Central Bank in Canada could not increase banking resources or expand the currency, but a single dollar over what is now possible, and the Federal Reserve System could a Central Bank legitimately make available more credit than the Federal Reserve System.

Central Bank in Canada could not increase banking resources or expand the currency, but a single dollar over what is now possible, and the Federal Reserve System could a Central Bank legitimately make available more credit than the Federal Reserve System.

Depreciation Of The Dollar

R.C. University Professor Sees Many Advantages From Depreciation Of Currency

Deliberate further reduction of the value of the Canadian dollar was advocated by Dr. W. A. Carruthers, of the University of British Columbia, in a public address, with the contention that such action would mean for Canada these things:

Improvement in the position of the primary industries; improvement in secondary industries as a result of the new strength in the primary; increased employment generally; higher wages; reduced relief costs and a balanced strain on government.

Further depreciation of the dollar would increase the burden on provinces and cities in meeting service charges on their New York loans, he acknowledged, but this drawback he believed would be more than outweighed by the indirect benefits these borrowers would receive through improved conditions in the Dominion as a whole.

To help them out, however, he suggested the Dominion Government should adopt a policy of close cooperation and help as that of the increased cost. Private borrowers with New York obligations would also face a heavier strain, but he believed the improvement they would feel in business would make it unnecessary for the Dominion to come to their assistance.

May Produce Supermen

Powerful Drug Discovers Which Has Great Possibilities

Discovery of a drug to produce "supermen" and prolong life, among other things, was claimed in London, England, by research workers who have been studying the subject for two years in the laboratories of the London hospital and in a chemical factory.

The drug, they said, eliminates fear, breeds courage, stimulates intellectual and physical strength, and already has produced a "superman" in the shape of a cat, after having been given the drug, fought and killed dogs, the research workers said, the cat becoming as ferocious as a tiger.

At the same time, when mice were given the drug they subdued cats without effort. It was claimed that the "superman" control on the function of the suprarenal or adrenal gland, it was said—ones of those who took part in the experiments told representatives of the press as expected the drug to prolong expectation of life at least a decade, and that "we are afraid to contemplate its ultimate physical and social effects."

Will Preserve Teeth

Diet Of Phosphorus and Vitamin "D" Is Recommended

The first 100 per cent. scientific proof of the specific diet for teeth, vitamin "D" comes from sunshine and cod liver oil, or their substitutes. The phosphorus foods in order of their richness are: egg yolk, milk, meats, leafy vegetables and the seeds, grains, roots and tubers.

Mostly Caught

The prisoner was led into the dock. The magistrate surveyed him. "Guilty or not guilty?" he asked. The prisoner shifted uneasily. "Not guilty, your worship," he replied.

"Where you ever in jail before?" asked the magistrate. "The man in the dock looked pained. "No, your worship," he replied. "I've never stolen anything before."

Reported Missing

A little boy surprised his parents by refusing to be carried into bed. "It's no use telling me the angels will write down in their books if I'm naughty, mamma," he said. "I might as well tell you they think up in heaven that I'm dead."

"But why should they think that?" "Because I haven't said my prayers for two weeks."

W. M. U. 1932

Revolvers For Protection

Necessary To Have a Police Permit To Carry Right Arm

Those who cruise on the waterways of the north are usually endowed with a measure of fearlessness, yet frequently information is asked for as to the advisability of carrying a revolver for protection. The experienced, after years of traveling through both the developed and the unsettled parts of Canada, usually answer the question with another—"Protection against what? Should the cook of a party not be by the mark? Or again should he be an excellent chef and prepare particularly tasty dishes on which one dines too freely, then may follow nights of terror. Tigers, lions, ferocious creatures of deserts may prove around the tent; or the fabulous "side hill winder" or the "gadget" may create a disturbance, otherwise the nights are uneventful.

On a canoe or other trip in Canada, except during the hunting season, firearms are a nuisance to the traveler and the rest of the party more dangerous than any marauder apt to be met with in the wilderness. One is not likely to meet anything but a peaceful and a peaceful nature on these trips, and deep as the desire may be to shoot them they are but a small target for a revolver even if it be aimed by an expert marksman.

Tourists going to Canada are reminded that revolvers and pistols may be brought into Canada as part of a tourist's outfit only under special permit, application for which must be made direct to the Department of National Revenue, Ottawa. This permit must be presented to the Customs Officer at the port of entry. Automatic pistols are not admitted.

It is also necessary to have a police permit in Form 76 to carry a revolver in Canada. Application for such a permit should be made to any officer of the Royal Canadian Mounted Police or of a Provincial Police force, or to the Chief of Police, Police Magistrate or Sheriff of any city or town in Canada.

By or by writing direct to the Commissioner, Royal Canadian Mounted Police at Ottawa. Such a permit may permit the person of whose good character and discretion the issuer is satisfied and only where good and sufficient cause is shown. Before embarking your outfit with a revolver consider whether a package of soda would not be less likely to cause more effective.

Trans-Canada Highway

Alberta Section Is Completed From Saskatchewan to R.C.

Nothing more remains to be done on the Alberta section of the trans-Canada highway, says Hon. C. L. McPherson, minister of public works, in commenting upon the report of a statement made by J. M. Wardle, chief engineer of the national parks in a Calgary address.

So far as Alberta is concerned, Mr. McPherson declared, the trans-Canada highway is a finished job from one side of the province to the other. The last work on it was done during the past summer and there is now a surfaced road right across from Saskatchewan to the British Columbia border. The section last done was a short distance west of Medicine Hat.

Additions To Italian Navy

Mussolini Orders Two Light Cruisers To Be Built

Premier Benito Mussolini of Italy, has ordered the navy department to lay down two light cruisers of 6,742 tons and two torpedo boats, each of 615 tons.

Their construction is a part of the 1931-1932 programme which was suspended under proposals to help children to defeat bad habits by the process of training the monkey to take the role to defeat its true work. At last we have found a monkey business that is a business.

Women Taxi Drivers

All the rights and privileges pertaining to the operation of a taxicab for hire were vested in women for the first time in the history of Winnipeg, when the council amended the by-law banning women from the cabs. The amendment followed a decision of the courts declaring the by-law ultra vires.

This Is Real Business

The London Daily Express says that most of the large banks in Spain employ monkeys to help children to defeat bad habits by the process of training the monkey to take the role to defeat its true work. At last we have found a monkey business that is a business.

The art of enamelling was practiced among the most ancient of civilized people.

PARIS HOLDS HER ANNUAL AEROPLANE SHOW

Here is a general view of the Paris Aeronautical Show, showing some of the models in their places ready for the Presidential visit. In the foreground is the principal Italian exhibit, the three-engined flying boat which flew over from Trieste and alighted on the Seine. Various countries send contributions to the show, which is one of the highlights of aeronautical displays.

Export Of Wheat

Canada Occupies First Position In Exports To Great Britain

Canada has replaced Russia as the dominant exporter of wheat to the United Kingdom. The October trade and navigation report of the United Kingdom shows this country occupied almost exactly the same position in the United Kingdom market as Russia occupied in October, 1931.

Of a total importation of 19,825,648 bushels in October, 1932, Canada supplied 11,294,629 bushels or 57.2 per cent, while Russia supplied 5,081,974 bushels or 25.6 per cent.

In October, 1931, of a total importation of 27,075,543 bushels, Russia supplied 11,097,144 bushels or 41.3 per cent, and Canada, 3,429,707 bushels or 12.4 per cent.

British import figures for the first 10 months of the year show Canada has moved up from second place in 1931 to first place among the supplying countries, Russia dropped from first place to fifth.

Railway Crossing Findings

Boasting Regarding Contributions From Grade Crossing Fund

The board of railway commissioners has no jurisdiction to make contributions from the grade crossing fund to works which, although they might relieve density of traffic over any particular crossing, nevertheless do not eliminate the crossing itself. This was the decision of the supreme court of Canada, on a reference to it by the board of railway commissions.

In the past the board had contributed not only to the removal of dangerous highway crossings but also to works which did not eliminate the crossing, although relieving traffic density.

In view of the numerous application for contributions applicable to works of the latter character, the board deemed it advisable to secure a judgment setting forth its powers under the Railway Act.

May Supply Everything

Russians have to take their food with them when they go to a desert to have their teeth filled. And if conditions do not improve in the Soviet paradise they will have to take their meals with them when they go to restaurants.

Left-Handedness A Puzzle

Professor Experimenting With Rate To Find Reason

Left-handedness, the origin of which has long puzzled men of science, may be explained by a group of rats on the Denver university campus.

Prof. George M. Peterson of the psychology department is conducting experiments with white rats in order to determine the past heredity plays in causing some individuals to be left-handed.

"Human handedness," Professor Peterson said, "has been attributed variously to training, heredity, the dominance of one part of the brain over the other, and the dominance of one eye. If it could be shown that one or another of these factors caused the preferential use of the hands in the rat, we would be a long way toward understanding the problem of human handedness."

To Preserve Chinese Folklore

Ministry of Education at Peking Starts Collection for Publication

The Ministry of Education at Peking has begun a collection of folk songs and jokes of Old China to incorporate in a volume which the ministry proposes to publish. Municipal and provincial governments have been asked to assist in gathering this material for the ministry. While China's literature is extensive, much of the folklore has been passed by word of mouth from generation to generation, and the ministry hopes to preserve many of the old songs and "narratives" for future generations in written form. The ministry is particularly interested in songs and tales relating to marriage customs and to the four seasons, of which there is a great number. It is possible that these alone will be sufficient to fill a volume.

Had Last Word

A Parliamentary candidate, whilst addressing a meeting, was frequently interrupted by a man who was inebriated, and who kept on saying, "You're silly!"

"The would-be M.P. could stand no longer, and suddenly exclaimed: 'You're drunk, man, you're drunk!'"

"Ah, I know," retorted the tipsy one. "But I'll be sober in the morning and you'll still be silly."

Canada's Principal Winter Sport Areas

Attractive Pastimes For The Whole Of The Winter Season

Some of hockey and curling, the principal attractions are skating, sledding, snowmobiling, tobogganing, hockey and curling. In every province these attractive pastimes are indulged in throughout the whole of the winter season. Each one is a pleasant diversion from the usual field and aquatic sports of summer, and these pleasant recreational activities are becoming increasingly popular both from a competitive and health-restorative standpoint. Covered and open air rinks will be found in every city and nearly every town in Canada.

Scores of hockey and curling contests are carried on in all parts of the Dominion from December till March. Tobogganing, snowmobiling, sled-racing and sled-jumping competitions are usually at the pinnacle of their excitement in January and February. Dog-racing events and winter carnivals are other sport features which create much interest and draw large numbers of spectators.

The Prairie Provinces and British Columbia afford opportunities for all the usual winter sport activities. The Winnipeg toboggan is the biggest annual winter entertainment in the world. The Pas dog-darby is still the feature event of its kind drawing entries from many parts of Canada and the United States. Sled-racing and sled-jumping at Banff, Alberta, and Revelstoke, British Columbia, attract large numbers of visitors, while those who desire less strenuous sport will find opportunities to play golf on scenic courses on the islands and mainland of southwestern British Columbia or to play to a climate which defies the onslaught of winter.

Required Little Thought

Russian Took Easy Way To Compete For Prize

You know the story about the prize which was to be given for the best account of the elephant. The Englishman went shooting in Africa, the German studied in the university and the Frenchman visited the zoo. The Russian, however, looked himself in an attic, drank an astronomical number of glasses of tea, and in the course of three months produced his solution on the elephant. It contained only the following sentence: "The Elephant Does it exist?"

Sixty Years As Organist

George H. Crookes, popular organist of the Old Parish Church at Bonhill, Scotland, has just completed 60 years as an organist and still is going strong. He is 73 years old. He has been organist for long periods in several churches in the Scottish capital.

His organ has been his constant companion, and has conducted a number of choral unions.

Shakespeare Museum For Italy Plans for a Shakespeare museum to be founded in the "House of Juliet" in Verona. The museum has been approved by Duke Giovanni the Duke of Mantua, and is to be opened in 1935. With houses dates from the 15th century and is said to have been that of Juliet's parents, the Capuleti.

Confectionery eaten in England in the last year weighed nearly 20 pounds per head of population.

Russia now has 115,000,000 sheep.

Urge World Plan Of Public Works

Economic Conference To Consider Building Aid For Workers

An international program of public works, likely to contribute to the reduction of unemployment throughout the world has been recommended by the Council of the League of Nations at its subject for the agenda of the London Monetary and Economic Conference.

A preparatory committee is being set up for the preliminary study of the problems to be considered at the conference. There will be two sub-committees, one to consider monetary and the other economic problems.

Three representatives of the monetary sub-committee have been selected to confer with the representatives of the International Labor organization and the technical committee of the Transit organization of the League to give further study to the problem of public works.

Continuity In Business

Many English and Scottish Firms Deal Back For Centuries

Two interesting items of news in an Aberdeen paper recently were that an Aberdeenshire farmer named Maitland can trace his family's occupancy of the same land for five hundred years, and that a firm of grocers in the main street of Aberdeen has been in existence for three centuries.

The Maitland family were the "old homestead" in Aberdeenshire when Robert Bruce was king of Scotland. When Mary, Queen of Scots, went to the Castle to witness the execution of her enemies, the Gordons, she possibly passed the grocery store which is still doing business at the old stand.

There is a firm of bell makers in London which has been in business over six hundred years. They have made bells which were heard by Edward the Third, and the people of England hear the same bells today. The firm has been in business since the time of Henry the Second, and it is said that the firm when they supplied bells to George the Third over two hundred years ago.

The firm which seat over the tea to Boston in 1773 is also carrying on. They too, can show the books recording the deal, with the account still unpaid.

All over the United Kingdom there are similar instances of continuity of trade and commerce. Age is a relative term, and while one hundred years is a long time in Canada, it is only yesterday in the old land.—St. Thomas Times-Journal.

Bringing Back The Buffalo

Success Of Dominion Government At Watkinsburg National Park

Buffalo National Park, the home of the bison, the largest of mammals in semi-wildlife in the world, was established in 1907, when it appeared apparent that the magnificent animals were on the verge of extinction. Through the purchase of the Michel Pado herd, the department of the interior established 710 animals in this park, located in the great ranging area of the buffalo and a natural grazing ground. The success of the venture is indicated in the rapid increase of the herd during the quarter century since its establishment.

Pigeon Racing In England

Over Two Million Birds Released For Flight Last Summer

Pigeon racing was more popular in England last summer than for many years. Over 2,000,000 birds were carried more than 2,000,000 birds to all parts of the country and to ports for destinations overseas, where they were released for their flight races. The race used 200 cars, many of them specially designed for the transport of the racers, to meet the requirements of 112 pigeon racing clubs; federations and combines.

Operator Cries With Shoublers Having lost both legs in the World War a former captain in the Polish army has had alterations made to an automobile which enables him to drive it. "The foot pedals have been transformed into sprockets, so that by means of the sprockets the man can operate the clutch or breaks with his shoulders."

A biologist has completed a study of deer-mice which has been in progress for 17 years.

The emperor fish is one of the largest and most "gaudy" of the coral fishes.

WORLD HAPPENINGS
BRIEFLY TOLD

Lawrence D. Jack, honor graduate of the University of British Columbia, has been selected as the 1933 Rhodes scholar for British Columbia.

J. Arthur Dupont, director of radio station CKAQ in Montreal, has been "nervous" by the Canadian broadcasting commission, to act as director of French language programmes.

William Blake, 11, of Lovell, Mass., sued his father for \$500 damages and won his case. The boy had been injured by an automobile driven by the elder Blake.

Seventeen carloads of frozen turkeys from Manitoba and Saskatchewan were shipped from Saint John for export. It was the first time such a large quantity had passed through that port.

British Columbia's losses by forest fires this year amounted to \$271,000. It was reported by Hon. N. S. Leighton, Minister of Lands. Last year the loss was \$1,471,181, and in 1930 it was \$1,468,000.

Single unemployed men from the cities who have been placed on Manitoba farms for the winter under the \$5 a month relief scheme, total 909 since November 15, Arthur MacNamee, of the relief commission, reported to the Manitoba government.

Prof. Augustus Picard, pioneer of the stratosphere, has been in Paris arranging passage to North America for a lecture tour. While he is there, he said, he will investigate the possibilities of a balloon ascension in Canada.

"There is little likelihood the western section of the Trans-Canada Highway will be completed within the next two years," J. M. Wardle, chief engineer of the national parks of Canada declared in an address at Calgary.

One of the unexplained mysteries Dr. Robert A. Millikan found in his extensive aerial, marine and terrestrial observation of cosmic rays at Lake Comoros, in the Indian Ocean, places on the continent this year is that the radiation is slightly more intense during the night.

Eleven of the 20 aeroplanes which will participate in a flight from Italy to the Chicago exposition next June, returned to their base after a successful test flight of 1,500 miles. The transatlantic flight is to be made in formation by way of Iceland, Greenland and probably Canada.

Receives Copley Medal

Royal Society of London Confers Recognition on Californians

Advice has been received that the Royal Society of London has awarded the Copley medal, highest distinction given by England for scientific research, to Dr. George E. Hale, of the Mount Wilson (Cal.) Observatory. The first American to receive it was Benjamin Franklin, to whom it was awarded in 1758 for his "curious experiments and observations on electricity."

The present award was for researchers in the magnetic field of the sun. First magnetic sunspots detected outside the earth were the magnetic fields in sun spots, discovered at the Mount Wilson observatory in 1908. Later, with the 350 foot lower telescope on Mount Wilson, the entire sun was found to be a magnet, with a magnetic field stronger than that of the earth but much weaker than the intense fields in sun spots.

Vikings Were Short Lived

Died Between Ages Of Thirty And Forty, Says Professor

Vikings who settled in Greenland centuries ago were stunted and wore out at 40, is the belief of Professor F. C. C. Hansen, leading Danish anatomist.

He is now dissecting the frozen remains of vikings brought back to Denmark by the Norseland expedition to northeastern Greenland. They indicate the men were probably of stocky build, but not very tall and that they died between ages of 30 and 40 years. They suffered greatly from gout and rheumatism, the professor believes.

Church Shipped In Crates

A complete church, packed in 203 crates, was shipped to the Solomon Islands from Sydney. When erected it will be 65 feet long and 26 feet wide. It is a gift from Alfred C. Sage, of Victoria, as a memorial to his son, the Rev. Charles C. Sage, a missionary.

When a man can't do anything else, he can develop a chinny chin chine.

W. N. U. 1932

Saskatchewan Game Act

More Rigid Enforcement Of Its Provisions Is Probable

Amendment to the Saskatchewan Game Act designed to enable the more rigid enforcement of its provisions are expected to come before the Saskatchewan legislature at the next session.

One amendment, copied from the Manitoba Act, will permit of the confiscation of all hunting equipment and transportation facilities being used by hunters who are found guilty of infringements of the Game Act. This clause specifies that motor cars, aeroplanes, firearms, boats, skiffs, canoes or any and all appliances used for hunting may be confiscated to the crown.

Provision is also being made to create additional game sanctuaries throughout the province, it being understood that at least 22 such preserves will be provided for in the schedules to the new act.

Other proposed amendments, it was learned, will be the placing with the Lieutenant-Governor-in-Council the power to fix the bag limit for each type of game, and to determine the period of each season for game birds and big game. Previously this was determined by statute and was inflexible.

Becomes Inland Water

Dyke Makes Zuluze Zee Into Yes! Lake

Famous Zuluze Zee in Holland, has been degraded from the status of a sea to that of an inland water. It is now known as Yes! Lake. The change came recently when a dyke, more than 20 miles long, connecting the province of North Holland and Friesland, was completed. The dyke separated the Zuluze Zee from the North Sea. Queen Wilhelmina will inaugurate a new highway on the dyke in the fall.

Winnipeg Newspaper Union

By Ruth Rogers

England is taking much interest in the Winnipeg Newspaper Union movement in which towns in that country link up with those in the United States having the same name. The linked towns are to be about the same size. Already 13 English towns have arranged to link up with those in the United States. They are Bath, Beverly, Bristol, Dorchester, Gloucester, Newbury, Northampton, Oxford, Plymouth, Reading, Rochester, Uxbridge and Torrington.

Growth Of India India's millions are steadily increasing. During the decade just ended, according to the census, the population has increased 34,000,000, to a total of 353,000,000. During the period covered by the census there has been no plague or serious famine. There are 940 females to every 1,000 males.

An inveterate smoker is one who can smoke without getting lather on his cigarette.

44

SIMPLE DRESS WITH SMART LINES WOULD MAKE ANY LITTLE SCHOOL GIRL HAPPY

The wide box plait effect from neck to hem makes it so distinctive. A novelty sash tied-like maturing made the original. The white ruffled collar and cuffs are so neat and trim. See miniature view—the pattern also provides for Peter Pan collar.

It is so easily made and so fascinating when finished. And it will cost you next to nothing. Daughter will love it.

Wool crepe in tobacco brown with tangy-red wool crepe trim and matching leather belt is smart for early fall.

Style No. 844 is designed for sizes 8, 10, 12 and 14 years.

Price of pattern 20 cents in stamps or coin (coin is preferred). Wrap coin carefully.

"Do you know that the number on the back of your car is not the same as the number on the front?"
"Yes; I really had that number put on to save bother. It's the number of my solicitor's car."—The Humorist, London.

Had Double Grievance

Woman Lost Hat And Was Fined For Stealing Train

Everybody must have been tempted at some mad moment to pull a train communication cord; and it is therefore remarkable that the dead has not, the fact remains that the inhabitants of the district paid much less for their "nags" than did their forefathers.

Formerly held in the heart of the city, the fair has grown so popular that it has been forced into the outskirts. This year there were about 300 dealers and some 2,000 spectators. One horse sold for a pair of mittens another for a watch, and a third for 35 cents. The prevailing price for a pair of horses was from \$10 to \$20 and any one asking more went home with the same number of equines as he arrived with.

When she explained her awful loss to the guard, however, he most unfeelingly refused to let the train go back for the hat—and, to add to her sense of injury, the passenger had to pay the full penalty.

England Takes Interest In Linking Up Namesake Towns

England is taking much interest in the Winnipeg Newspaper Union movement in which towns in that country link up with those in the United States having the same name. The linked towns are to be about the same size. Already 13 English towns have arranged to link up with those in the United States. They are Bath, Beverly, Bristol, Dorchester, Gloucester, Newbury, Northampton, Oxford, Plymouth, Reading, Rochester, Uxbridge and Torrington.

Growth Of India India's millions are steadily increasing. During the decade just ended, according to the census, the population has increased 34,000,000, to a total of 353,000,000. During the period covered by the census there has been no plague or serious famine. There are 940 females to every 1,000 males.

An inveterate smoker is one who can smoke without getting lather on his cigarette.

SIMPLE DRESS WITH SMART LINES WOULD MAKE ANY LITTLE SCHOOL GIRL HAPPY

The wide box plait effect from neck to hem makes it so distinctive. A novelty sash tied-like maturing made the original. The white ruffled collar and cuffs are so neat and trim. See miniature view—the pattern also provides for Peter Pan collar.

It is so easily made and so fascinating when finished. And it will cost you next to nothing. Daughter will love it.

Wool crepe in tobacco brown with tangy-red wool crepe trim and matching leather belt is smart for early fall.

Style No. 844 is designed for sizes 8, 10, 12 and 14 years.

Price of pattern 20 cents in stamps or coin (coin is preferred). Wrap coin carefully.

An Invisible Ray

Scientists Claim It Holds A Great Influence On Plant Life

An invisible ray that lurks unseen in the bright sunshine was identified by scientists of the Smithsonian Institution as wielding a great but unexplained power over growth of crops and other plants.

The ray consists of light, like other rays from the sun, but unlike them is not visible to the human eye. Actually it includes many rays, classed as the "infra-red" whose wave-length is longer than red light, the longest light waves to which the eye is sensitive.

Infra-red light, the Smithsonian Institution announced, has been found to have an important influence on the way plants grow. Preliminary experiments seem to show that too much infra-red light cuts down the efficiency with which a plant manufactures sugars and starches; the substance which makes plants valuable as food. Apparently too much infra-red light reduces the green coloring matter, or chlorophyll, in the plant.

The ray for chlorophyll is the more efficient as the plant in manufacturing sugars and starches.

One Of Cheapest Foods

Honey Well Worth Buying And Industry Valuable To Canada

Is honey buying? Most decidedly, yes! And in these times of depression perhaps the best argument for buying honey lies in its cheapness.

Professor Hawk of Jefferson Medical College, U.S.A., a leading authority on foods, found through careful experimentation that bread eaten with honey digests as quickly as bread eaten alone although the food value is doubled. With Canadian honey selling as it is today, at from six to ten cents per pound, that is a fact to be borne in mind.

Another argument in favor of buying honey lies in the value of the honey industry to Canada. In the last eight years Canadian honey production has been practically doubled despite the unusual importation into Canada of quantities of foreign cane sugar and syrups. The honey industry is a growing one and merits the support of all Canadians.

Recipes For This Week

(By Betty Barclay)

GINGER PUDDING

1/2 cup sugar
1/2 cup milk
1/2 cup water
3/4 cup brown sugar
1/2 cup raisins
1/2 cup currants
1/2 cup molasses
1/2 cup butter
1/2 cup flour
1/2 cup baking powder
1/2 cup soda
1/2 cup yeast
1/2 cup salt
1/2 cup vinegar
1/2 cup oil
1/2 cup lard
1/2 cup shortening
1/2 cup margarine
1/2 cup cream
1/2 cup milk
1/2 cup water
1/2 cup sugar
1/2 cup brown sugar
1/2 cup molasses
1/2 cup butter
1/2 cup flour
1/2 cup baking powder
1/2 cup soda
1/2 cup yeast
1/2 cup salt
1/2 cup vinegar
1/2 cup oil
1/2 cup lard
1/2 cup shortening
1/2 cup margarine
1/2 cup cream
1/2 cup milk
1/2 cup water
1/2 cup sugar
1/2 cup brown sugar
1/2 cup molasses
1/2 cup butter
1/2 cup flour
1/2 cup baking powder
1/2 cup soda
1/2 cup yeast
1/2 cup salt
1/2 cup vinegar
1/2 cup oil
1/2 cup lard
1/2 cup shortening
1/2 cup margarine
1/2 cup cream
1/2 cup milk
1/2 cup water
1/2 cup sugar
1/2 cup brown sugar
1/2 cup molasses
1/2 cup butter
1/2 cup flour
1/2 cup baking powder
1/2 cup soda
1/2 cup yeast
1/2 cup salt
1/2 cup vinegar
1/2 cup oil
1/2 cup lard
1/2 cup shortening
1/2 cup margarine
1/2 cup cream
1/2 cup milk
1/2 cup water

CHAPTER II—Continued.

To be so plainly injured by his own men when any matter of importance came up, made him appear a nobody. To have Baker issuing orders and getting a patrol ready without first consulting him, seemed to him a gross violation of discipline. He had formerly been forced to follow Baker on his way in managing the post; but now, shocked at realizing how very little he himself amounted to, and confident that his six months of experience made him capable of running the detachment himself, he had sworn he was going to come down on these men and come down hard.

But the secret and real source of his anger was a deep, unending jealousy of Baker because of Elizabeth Spaulding. More clearly at every talk with her, he saw she trusted in Baker, liked him, and was going to marry him. Her cool indifference to his advances, and her comparison between him and a ninety-months sergeant cut his pride to the quick.

Pretty, cool, a little haughty, she was just the kind of girl who suited him, and was the only person here at Endurance whom he cared to associate with. His admiration had mounted, it had grown into passion, and it had become a fire in his blood—the first and only passionate affection he had ever known. His life, formerly so lethargic and purposeless, had taken on an aim, a goal. That goal was to win her engagement and wrest her away from the post.

As Alan now hurried into the cabin, Haskell swung on him:

"Don't you know better than to come bustling into my quarters without knocking and asking permission? Go out and try it again."

His words went past Alan unheeded. Alan's mind was too much a turmoil. . . . Jimmy murmured, "How alone there on the lonely snowed Alaska, those six dead strangers escaping with their loot. . . . There was but one thought in his mind—to overhaul those two ciphers before they were lost beyond all pursuit."

Forgetting even his salute, he came across to the desk. As he checked by the look on his face, Haskell did not regard the repetition, but he listened silently while Alan repeated the robbery, murder, escape.

"They're heading in toward Big Alaska toward a mushing country lying back there in the northeast," Alan explained quickly. "I'll call the Thel-Ash, the Little Bear, and the Waters. It's a thousand square miles of ice-eros-creek underways—lakes, channels, stop creek, and mope-the bog all covered with flags and willows. They're heading for the Thel-Ash. That's why they stayed here."

It is sure to overtake them on one branch or other.

"Yes, and have half my men shot up. I'm responsible for them. I know what's kind of responsibility means. You're go-tying me down, I know I know are doing wrong."

Haskell tapped the table with his pen. "I've given you my men, Baker, and listened to you. If you refuse to obey orders, you'll stay here at the post, and I'll put Corporal Haskard in charge of this detail. Take your choice."

Alan was not the fool to believe Haskell was bluffing. The man would keep him here and demote him for refusing to obey a command. He had been waiting months for just such a chance. It was a question of holding out against those ignorant instructions or getting away with the men and making the best of a bad job.

Heaten, weary of arguing, he gave in. "All right, inspector. I'll follow both branches."

"To cut off further delay he whirled abruptly on his heel and strode out. Haskard came down from barracks. A little later in the corner, listening, he took his seat in the launch. Alan and Bill and Young were stirring around guns, tent, grub and blankets. On the terrace above, with a book in her lap, Elizabeth Spaulding watched calmly.

But all Alan's ardor had gone. All his leading urge to be on the chase had gone. Premotion whispered, and his whinger called him. As he glanced around at his men, the comrades he was leading and was responsible for, he was thinking that tomorrow they would take up the chase, and he would be dead—somewhere up the spruce-burled Alaskan.

They were at last away on the pursuit.

Nearing End of Career

Woman Has Traded Lighthouse On
Brittany Coast 43 Years

One of the bravest women in France is a thirty-year-old woman, Durand, the 60-year-old lighthouse keeper at the island of Irobert on the Brittany coast. For 43 years Mlle. Durand has kept the lighthouse burning brightly to warn mariners of the dangerous and tempestuous rocks which surround the lighthouse. Since her husband died 43 years ago Mlle. Durand added only by her daughter has climbed the seventy odd steps to the top of the tower and trimmed the giant lamps that cast a light over the treacherous rocks.

Alan was not the fool to believe Haskell was bluffing. The man would keep him here and demote him for refusing to obey a command. He had been waiting months for just such a chance. It was a question of holding out against those ignorant instructions or getting away with the men and making the best of a bad job.

Heaten, weary of arguing, he gave in. "All right, inspector. I'll follow both branches."

"To cut off further delay he whirled abruptly on his heel and strode out. Haskard came down from barracks. A little later in the corner, listening, he took his seat in the launch. War Debts And Credits

Cannot the Divided Tables Allies Get
Credit For Their Debt

An article in the Montreal Star says that it is a fairly common thing to see the December instalments actually added to the amounts which the European nations will ultimately have to pay. They go on paying. But how can they? Germany has definitely stopped. Nothing will start her again. She repudiates with a great moral fervor because she is convinced that her debt always was unfair. If she does not pay, how can France and Great Britain raise the money? What they need is a moral fervor of their own which will declare to the world that the so-called war debts are simply an artificial and fantastic bookkeeper's effort to be divided into debts and credits—which cannot morally be so divided unless the Allies be given credit for their debt from Mors to Chateau Thierry.

Alan was not the fool to believe Haskell was bluffing. The man would keep him here and demote him for refusing to obey a command. He had been waiting months for just such a chance. It was a question of holding out against those ignorant instructions or getting away with the men and making the best of a bad job.

Heaten, weary of arguing, he gave in. "All right, inspector. I'll follow both branches."

"To cut off further delay he whirled abruptly on his heel and strode out. Haskard came down from barracks. A little later in the corner, listening, he took his seat in the launch. CANADIAN WOMEN
FIND DUSTING
DISTASTEFULDust cloths going into discard
Unpleasant to use; a bother to
WashAPPROLEF WONDER PAPER
HAS GREAT VOGUE

Of all household chores, that of dusting is the most repulsive, the oddest of women.

However, this condition, like any another concern with housework, is yielding going radical change. In a great many Canadian homes women are discarding dust cloths entirely, and are using Approlef Wonder Paper instead, because it actually dusters, as it cleans—as it polishes does a better and much quicker job than the old dust cloth ever did.

This new, and curiously modern Wonder Paper, is made from clean glass, and such paper, trained in a scientific way with a high-grade furniture polish and a special dusting agent.

Applied Wonder Paper comes in handy packages, twenty-five large sheets for twelve cents. You crumple a sheet into a soft wad and use over the surface to be dusted. Then you wipe the wad so it is soaked or wet, turn the Wonder Paper inside out, and use the other side to polish and leaving film to furniture and woodwork. It's all done in one stroke, and you are done.

And when you are through, there's no need to shake out the wad. There's no need to wash it. You crumple a sheet into a soft wad and use over the surface to be dusted. Then you wipe the wad so it is soaked or wet, turn the Wonder Paper inside out, and use the other side to polish and leaving film to furniture and woodwork. It's all done in one stroke, and you are done.

Wonder Paper is made by the makers of the famous "Kleenex" Heavy Wonder Paper in the Green Box.

Special Offer
If you're groggy, hardware and department stores have Approlef Wonder Paper and you've completed the most strenuous part of your housework. You're ready to go to bed and in mail this coupon.

Applied Paper Company, Ltd.
Enclosed find 25c for which please send me one full-size package of Wonder Paper and your 100c refund in cash or check.

LITTLE HELPS FOR THIS WEEK

"He that dwelleth in the secret place of the Most High shall abide under the shadow of the Almighty."
—Psalm 91.

They who on the Lord rely,
Safe, sure, though dangers be high
His faithful servants are,
And each faithful servant's need
When they wake or when they sleep.

Angels guide their righting keep;
Death and danger may be near,
Faith and love have power to fear,
And the shadow of the Almighty.

"There shall no evil befall thee,
Neither shall any plague come nigh
thy dwelling;" is a promise to the
lowest extent verified in the case of
all who dwell in the secret place of
the Most High. In those sorrows
are not evil, sicknesses are not
plagues; the shadow of the Almighty
extends far around those who abide
under the shadow of the character of
things which come within its influence.
—Amos.

One of the commonest complaints of infants is worms, and the most effective application for them is Mother's Remedy Worm Expeller.

Grass did well for a weight litter of his day and age, which was before Munchie kept a ration of forty-two million in line with his chin.

Wife: "Are you for, just one after that two years for arson, and now you can't even make the kitchen fire burn?"

Interesting Local Items

The morning train last Monday was cancelled owing to a snow slide in the mountains.

Mr. Calvin Coolidge, 30th president of the United States, died suddenly at his home last Thursday evening.

Archie Todd, son of Mr. and Mrs. T. Todd of this town, was taken to the hospital last week-end to undergo an operation. He is now much improved.

One man at the south end says they haven't heard anything about the depression at the Brick & Coal plant yet. All they are thinking about there, he says, is the compression.

The Review would appreciate it if all advertisers would have their copy for change of ads. in the office by noon on Wednesday. This will greatly help in getting the paper out on time.

During the high wind storm last Monday the roof was blown off the powder house at Brick and Coal Plant. Several out houses in the south end were seen wandering promiscuously over the prairie.

Unless it may be necessary to change the date on account of any developments that may take place at the conference call-meeting, the Alberta Leg. ed by Premier Bennett to discuss isolation will be called to meet on February 2nd.

Last Monday a wind of almost cyclonic proportions swept over the district and kept up all day. Tons of tumble weed, paper and dust went east on Broadway and good sized pebbles furnished a modern jazz on the windows. It was one of the worst winds we have had for some time.
